

In the Claims

Claims 1-79 (Canceled).

Claim 80 (Currently amended): A method of treating a solid tumor comprising the administration of a composition $\gamma\delta$ -T cell activator comprising a pharmaceutically acceptable carrier in an amount sufficient to induce an at least 5-fold increase in the $\gamma\delta$ T cell population in a subject having a solid tumor, wherein said $\gamma\delta$ T cell $\gamma\delta$ -T cell activator is a compound of:

a) formula (I):

Formula (I)

wherein Cat^+ represents at least one organic or mineral cation that can be the same or different;
m is an integer from 1 to 3;

B is O, NH, or any group capable of being hydrolyzed;

Y = $\text{O}^- \text{Cat}^+$; a C_1 - C_3 alkyl group; -A-R; or a radical selected from the group consisting of a nucleoside, an oligonucleotide, a nucleic acid, an amino acid, a peptide, a protein, a monosaccharide, an oligosaccharide, a polysaccharide, a fatty acid, a simple lipid, a complex lipid, a folic acid, a tetrahydrofolic acid, a phosphoric acid, an inositol, a vitamin, a co-enzyme, a flavonoid, an aldehyde, an epoxyde and a halohydrin;

A is O, NH, CHF, CF_2 or CH_2 ; and,

R is a linear, branched, or cyclic, aromatic, non-aromatic, saturated or unsaturated C_1 - C_{50} hydrocarbon group, optionally interrupted by at least one heteroatom, wherein said hydrocarbon group comprises an alkyl, an alkylenyl, an alkynyl or an alkylene, which can be substituted by one or several substituents selected from the group consisting of: an alkyl, an alkylenyl, an alkynyl, an epoxyalkyl, an aryl, an heterocycle, an alkoxy, an acyl, an alcohol, a carboxylic group ($-\text{COOH}$), an ester, an amine, an amino group ($-\text{NH}_2$), an amide ($-\text{CONH}_2$), an imine, a nitrile, an hydroxyl ($-\text{OH}$), a aldehyde group ($-\text{CHO}$), a halogen, a halogenoalkyl, a thiol ($-\text{SH}$), a thioalkyl, a sulfone, a sulfoxide, and a combination thereof; or

b) formula (II):

in which X is an halogen, B is O or NH, m is an integer from 1 to 3, R₁ is a methyl or ethyl group, Cat⁺ represents at least one organic or mineral cation, n is an integer from 2 to 20, A is O, NH, CHF, CF₂ or CH₂, and Y is O⁺Cat⁺, a nucleoside, or a radical -A-R, wherein R is selected from the group consisting of:

1)

wherein n is an integer from 2 to 20, R₁ is a (C₁-C₃)alkyl group, and R₂ is an halogenated (C₁-C₃)alkyl, a (C₁-C₃)alkoxy-(C₁-C₃)alkyl, an halogenated (C₂-C₃)acyl or a (C₁-C₃)alkoxy-(C₂-C₃)acyl;

2)

wherein n is an integer from 2 to 20, and R₁ is a methyl or ethyl group; and

3)

wherein R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is -CH- or -N- and R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester; or

c) formula (XII):

in which R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is -CH- or -N-, R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester, Cat⁺ represents at least one organic or mineral cation that can be the same or different, B is O or NH, m is an integer from 1 to 3, A is O, NH, CHF, CF₂ or CH₂, and Y is O⁺Cat, a nucleoside, or a radical -A-R, wherein R is selected from the group consisting of:

1)

wherein n is an integer from 2 to 20, R₁ is a (C₁-C₃)alkyl group, and R₂ is an halogenated (C₁-C₃)alkyl, a (C₁-C₃)alkoxy-(C₁-C₃)alkyl, an halogenated (C₂-C₃)acyl or a (C₁-C₃)alkoxy-(C₂-C₃)acyl;

2)

wherein n is an integer from 2 to 20, and R₁ is a methyl or ethyl group; and

3)

wherein R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is CH or N, and R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester.

Claim 81 (Previously presented): The method according to claim 80, wherein said $\gamma\delta$ T cell activator is provided in an amount sufficient to induce an at least 10-fold increase in the $\gamma\delta$ T cell population in a subject.

Claim 82 (Previously presented): The method according to claim 80, wherein at least two treatments are administered to said subject.

Claim 83 (Previously presented): The method according to claim 80, wherein at least four treatments are administered to said subject.

Claim 84 (Previously presented): The method according to claim 80, wherein the $\gamma\delta$ T cell activator is administered in more than one treatment with an interval of about two to about eight weeks between treatments.

Claim 85 (Previously presented): The method according to claim 80, wherein the $\gamma\delta$ T cell activator is administered in more than one treatment with an interval of about three to about four weeks between treatments.

Claim 86 (Previously presented): The method according to claim 80, wherein said $\gamma\delta$ T cell activator is provided in an amount sufficient to expand the $\gamma\delta$ T cell population in a subject to reach between 30-90% of total circulating lymphocytes in a subject.

Claim 87 (Previously presented): The method according to claim 80, wherein the biological activity of $\gamma\delta$ T cells is increased in said subject.

Claim 88 (Previously presented): The method according to claim 80, wherein the solid tumor is renal cancer.

Claim 89 (Withdrawn): The method according to claim 80, wherein said solid tumor is selected from the group consisting of a melanoma, ovarian cancer, colon cancer, lung cancer, pancreatic cancer, neuroblastoma, head or neck cancer, bladder cancer, breast cancer, brain cancer and gastric cancer.

Claim 90 (Previously presented): The method according to claim 80, wherein the $\gamma\delta$ T cell activator is a composition comprising a compound capable of inducing the proliferation of a $\gamma\delta$ T cell in a pure population of $\gamma\delta$ T cell clones when said compound is present in culture at a concentration of less than 1 mM.

Claim 91 (Previously presented): The method according to claim 80, wherein the $\gamma\delta$ T cell activator is a compound of formula (I):

wherein Cat^+ represents at least one organic or mineral cation that can be the same or different;
m is an integer from 1 to 3;

B is O, NII, or any group capable of being hydrolyzed;

Y = O^-Cat^+ ; a C_1 - C_3 alkyl group; -A-R; or a radical selected from the group consisting of a nucleoside, an oligonucleotide, a nucleic acid, an amino acid, a peptide, a protein, a monosaccharide, an oligosaccharide, a polysaccharide, a fatty acid, a simple lipid, a complex lipid, a folic acid, a tetrahydrofolic acid, a phosphoric acid, an inositol, a vitamin, a co-enzyme, a flavonoid, an aldehyde, an epoxyde and a halohydrin;

A is O, NII, CHF, CF_2 or CH_2 ; and,

R is a linear, branched, or cyclic, aromatic, non-aromatic, saturated or unsaturated C_1 - C_{50} hydrocarbon group, optionally interrupted by at least one heteroatom, wherein said hydrocarbon

group comprises an alkyl, an alkylenyl, an alkynyl or an alkylene, which can be substituted by one or several substituents selected from the group consisting of: an alkyl, an alkylenyl, an alkynyl, an epoxyalkyl, an aryl, an heterocycle, an alkoxy, an acyl, an alcohol, a carboxylic group (-COOH), an ester, an amine, an amino group (-NH₂), an amide (-CONH₂), an imine, a nitrile, an hydroxyl (-OH), a aldehyde group (-CHO), a halogen, a halogenoalkyl, a thiol (-SH), a thioalkyl, a sulfone, a sulfoxide, and a combination thereof.

Claim 92 (Previously presented): The method according to claim 91, wherein the $\gamma\delta$ T cell activator is a compound of formula (II):

in which X is an halogen, B is O or NH, m is an integer from 1 to 3, R₁ is a methyl or ethyl group, Cat⁺ represents at least one organic or mineral cation, n is an integer from 2 to 20, A is O, NH, CH₂, CF₂ or CH₂, and Y is O⁺Cat⁺, a nucleoside, or a radical -A-R, wherein R is selected from the group consisting of:

wherein n is an integer from 2 to 20, R₁ is a (C₁-C₃)alkyl group, and R₂ is an halogenated (C₁-C₃)alkyl, a (C₁-C₃)alkoxy-(C₁-C₃)alkyl, an halogenated (C₂-C₃)acyl or a (C₁-C₃)alkoxy-(C₂-C₃)acyl;

2)

wherein n is an integer from 2 to 20, and R₁ is a methyl or ethyl group; and

3)

wherein R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is -CH- or -N-, and R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester.

Claim 93 (Previously presented): The method according to claim 92, wherein the compound of formula (II) is (R, S)-3-(bromomethyl)-3-butanol-1-yl-diphosphate.

Claim 94 (Previously presented): The method according to claim 92, wherein the $\gamma\delta$ T cell activator is administered in a dose to humans between 10 mg/kg to 100 mg/kg.

Claim 95 (Currently amended): The method according to claim 92, wherein said $\gamma\delta$ T cell activator is administered by intravenous infusion in a dose to humans that is calculated according to the formula (I): single dose (mg/kg)=(10 to 100) * N (I), where N is the number of weeks between treatments such that N is between about 3 and about 4.

Claim 96 (Withdrawn): The method according to claim 91, wherein the $\gamma\delta$ T cell activator is a compound of formula (XII):

in which R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is -CH- or -N-, R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester, Cat⁺ represents at least one organic or mineral cation that can be the same or different, B is O or NH, m is an integer from 1 to 3, A is O, NH, CH₂, CF₂ or CH₂, and Y is O⁺Cat⁺, a nucleoside, or a radical

-A-R, wherein R is selected from the group consisting of:

1)

wherein n is an integer from 2 to 20, R₁ is a (C₁-C₃)alkyl group, and R₂ is an halogenated (C₁-C₃)alkyl, a (C₁-C₃)alkoxy-(C₁-C₃)alkyl, an halogenated (C₂-C₃)acyl or a (C₁-C₃)alkoxy-(C₂-C₃)acyl;

2)

wherein n is an integer from 2 to 20, and R₁ is a methyl or ethyl group; and

3)

wherein R₃, R₄, and R₅ are identical or different and are a hydrogen or (C₁-C₃)alkyl group, W is CH or N, and R₆ is an (C₂-C₃)acyl, an aldehyde, an (C₁-C₃)alcohol, or an (C₂-C₃)ester.

Claim 97 (Withdrawn): The method according to claim 96, wherein the compound of formula (XII) is (E)-4-hydroxy-3-methyl-2-butenyl pyrophosphate.

Claim 98 (Withdrawn): The method according to claim 96, wherein the compound of formula (XII) is (E)-5-hydroxy-4-methylpent-3-enyl pyrophosphonate.

Claim 99 (Withdrawn-Currently amended): The method according to claim 96 where said ~~γδT-activator~~ ^{γδT-activator} is administered by intravenous infusion in a dose to humans that is calculated

according to the formula (I) single dose (mg/kg)=(0.01 to 20) * N (I) where N is the number of weeks between treatments such that N is between about 3 and about 4.

Claim 100 (Currently amended): The method according to claim 80, further comprising separately administering to a subject in need thereof an effective amount of a $\gamma\delta$ T cell $\gamma\delta$ T-activator and an interleukin-2 (IL-2) polypeptide.

Claim 101 (Previously presented): The method according to claim 100, wherein the interleukin-2 polypeptide is administered over a period of time comprised between 1 and 10 days.

Claim 102 (Previously presented). The method according to claim 80, wherein said $\gamma\delta$ T cell activator is 3-(bromomethyl)-3-butanol-1-yl-diphosphate (BrHPP) and said solid cancer is renal cell carcinoma.

Claim 103 (Withdrawn). The method according to claim 80, wherein said $\gamma\delta$ T cell activator is 3-(bromomethyl)-3-butanol-1-yl-triphosphate (BrHPPP).

Claim 104 (New). The method according to claim 100, wherein said IL-2 is administered subcutaneously, $\gamma\delta$ T cell activator is 3-(bromomethyl)-3-butanol-1-yl-triphosphate (BrHPPP) and the BrHPP is administered intravenously.

Claim 105 (New). The method according to claim 104, wherein said IL-2 is administered at a daily dose of between 0.2 and 2 MU per day.

Claim 106 (New). The method according to claim 104, wherein said IL-2 is administered at a daily dose of between 0.2 and 1.5 MU per day.

Claim 107 (New). The method according to claim 104, wherein said IL-2 is administered at a daily dose of between 0.2 and 1 MU per day.
